HOSE IT'S MAGIC SOFT SMART 15 METERS

Model : 15 Meters

4,8 cutted meters – 5,2 meters at rest after stretch (tolerance +- 0,5)

Length during extension: 15 meters at 4 BAR

TECHNICAL SHEET

Length during extension: 15 meters

Diameter: ½" internal 10,5 -14 mm external around 16 mm (tolerance +- 0,5mm)

Surface: smooth or striped

3 Layers

Material: 100% virgin PP + SEBS, dry blend exclusive Euroequipe

Inner colour: based on request

Inner colour: based on request

2 Hidroself quick connectors

Working temperatures: +2 °C / +55 °C

Ideal working pressures: 4 bar (from 3 to 4 BAR for correct use of Follow-me technology)

Burst pressure above 12 BAR (datas refer to 20 - 25 °C)

UV Stable

Country of Origin: 100% made in italy

Raw materials: All raw materials are BPA free, latex free compliant with the USA regulations PROP 65

KEY POINTS

- Compact, light, easy grip
- The hose structure makes it anti-kink and anti-torsion
- Ready to use: Complete KIT with 2 fittings, spray nozzle 6 jets
- Flexible even at low temperature
- Extends with water pressure until 15 mt
- Perfect for camping, boats, terraces, balconies ...
- Easy to store, no need of much space
- In case of breakage/damage it can be cut and reassembled easily
- Eco-friendly: 100% recyclable in plastic (no metal, recycled material, nylon etc...)
- Simple and Modern Design

HOW IT WORKS

Attach the hose to the tap equipped with a quick coupling tap adapter, open the tap until reaching the extension of the hose, then open spray nozzle to start watering.

The hose reaches the declared measurement with an operating pressure of 4 bar. For lower pressures (between 3 bar and 4 bar) the length of 3 times the original length can be reached thanks to the 'Follow-me' technology by applying a natural and light pulling of the hose.

Thanks to the simple pressure made by pulling the hose at the moment of use, the hose stretches back to its original length as soon as the pressure inside the hose is brought back to zero and the water has been emptied from the hose.

Do not mount watering devices with a flow rate greater than the hose or tap to which the hose is connected, if the pressure is reduced the hose does not extend.

Avoid exceeding the maximum extension and avoid leaving the hose in extension for long periods, the return and the characteristics of the hose could be modified or damaged.
